REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: The combination of claimed features was not found in the prior art as follows: The prior art contains the use of general purpose registers during user mode and the use of privileged registers only during supervisory or kernel mode. The prior art also taught a bit that controlled whether the privileged registers could be used during user mode. The prior art also taught use of a mask to determine the address bits to use in address comparison for memory access permission determination. However the limitations (in claims 1,11) of a mask register writable in kernel mode or privileged state for specifying ones of the plurality of privileged state registers to be accessible by the instructions executing in a non-privileged state (or user mode in claim 11) was not found in the prior art. Also in claim 16, (and claim 23 which details the code for implementing the features corresponding to the features in claim 16) the combination of limitations including the mask register containing a bit pattern specifying ones of said plurality of privileged registers to be read-only accessible by instructions executing while the microprocessor is in user mode was not found in the prior art. As to claims 20,26 the program code (or operating system in claim 26) for implementing the mask register writable only in privileged state specifying ones of the plurality of privileged state registers to be accessible by instructions in a non-privileged state (or user mode in claim 26) was not found in the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
